

PRIMARY PRECISION SEEDER BAR

FERTILISER BOOT OPTIONS and PART No's

Polyurethane fertiliser cups

These popular cups deliver a vertical profile of fertiliser into the slot in all conditions.

FT-PFC-3001
(includes s/steel T-bolt clamp)

Fertiliser injector boots

Adjustable-depth steel tubes are available for deep placement of fertiliser. Front-facing tube slides into the main fertiliser tube and the bracket is adjusted on the same pin and R-clip that secures the seed boot.

Ground-engaging tip is tungsten carbide protected.

Unsuitable for harsh conditions.

FT-3003

Fixed fertiliser tube

This heavy duty, point-mounted tube is designed to place high rates of fertiliser at full depth of working.

(winged point model shown)

NI-FT-PMK-LH
NI-FT-PMK-RH
suits knife point

NI-FT-PMW-LH
NI-FT-PMW-RH
suits winged point

Liquid/gas delivery at depth

Stainless steel tube is formed to follow the rear edge of each point to carry material to a selected discharge height while the slot is still open.

FT-3325-LIQK (for knife point)
FT-3327-LIQW (for winged point)
